The survival of the publishing industry depends upon the existence of a public who will buy the printed word in the form of newspapers, books and magazines. Over the past several years, however, the advance of electronic media, particularly CD-ROMs, online computer services, and the internet, has made information available to the public electronically without the need for printed materials. As the availability of electronic media increases and as it is more easily accessible, the public has less need for printed materials.

3. Read the given passage carefully. And prepare notes and summary. [5+5]

The world needs to dramatically reduce its greenhouse gas emissions and fast, if there's any hope of preventing worse and more frequent extreme weather events. That means shifting to renewable sources of energy – and, importantly, decarbonizing transportation, a sector that is now responsible for about a quarter of the world's carbon dioxide emissions. But the path to that cleaner future is daunting, clogged with political and societal roadblocks, as well as scientific obstacles. Perhaps that's one reason why the electric vehicle – already on the road, already navigating many of these roadblocks – swerved so dramatically into the climate solutions spotlight in 2021.

Just a few years ago, many automakers thought electric vehicles, or EVs, might be a passing fad, says Gil Tal, director of the Plug-in Hybrid and Electric Vehicle Research Center at the University of California, Davis. It's now clear to everyone that [EVs are] here to stay. Globally, EV sales surged in the first half of 2021, increasing by 160 percent compared with previous year. Even in 2020 – when most car sales were down due to the COVID-19 pandemic – EV sales were up 46 percent relative to 2019. Meanwhile, automakers from General Motors to Volkswagen to Nissan have outlined plans to launch new EV models over the next decade: GM pledged to go all – electric by 2035, Honda by 2040. Ford introduced electric versions of its iconic Mustang and F – 150 pickup truck.

“Consumer demand for EVs isn't actually driving the surge in sales”, Tal says. The real engine is a change in supply due to government policies automakers to boost their EV production. The European Union's toughened CO₂ emissions laws for the auto industry went into effect in 2021, and automakers have already bumped up new EV production in the region. China mandated in 2020 that Evs make up 40 percent of new car sales by 2030. Costa Rica has set official phase-out targets for internal combustion engines.
